FULL STACK DEVELOPER

Experienced in developing Full Stack Ruby and JavaScript applications and APIs. I have built my career by learning to operate within and manage teams while consistently delivering strict standards of product and service in fast-paced environments. After a great introduction to object-oriented design and Web/API fundamentals along with Ruby on Rails and Javascript at Flatiron School; React and the MERN stack has been the focus of my personal projects and study since graduation.

TECHNICAL SKILLS

JavaScript, React, Node.js, Express, Redux, MongoDB, PostgreSQL, Ruby on Rails, API, Git, Github, Heroku platform

TECHNICAL PROJECTS

Chicken Tinder - [Github](#) | [Live Demo](#) | [Video Demo](#)

A Tinder-style application to help groups of people decide where to eat. Designed to emulate the menu of a retro diner, a collection of local restaurants is presented to each player and given "thumbs-up" or "thumbs-down".

- Integrates Yelp via API to retrieve search results that are unique to each game
- Creates JS Class Objects and graphic cards for each search result for storage on the client
- Powered by a REST Rails API implementing nested routes utilizing parent-child relationships established with Object Relational Mapping for the purpose of serving serialized JSON data to the client
- Registers player information and results of each game to be used in multiple back-end features

Trackerbot - [Github](#) | [Live Demo](#) | [Video Demo](#)

An organizational tool in the "Personal Assistant" category developed for the purpose of recording and quickly retrieving locations of household objects that are often misplaced.

- Updates user authentication, login status, and all other user data by implementing actions integrated with Redux-Thunk middleware allowing for asynchronous dispatches to store
- Utilizes a diverse collection of React Components alongside client-side-routing allowing for smooth navigation
- Presents data to the user in a straightforward and simple design inspired by an early command-line interface

Market Manager - [Github](#) | [Video Demo](#)

Taking inspiration from software I have used in my time in the grocery industry I designed an application that registers clerks and allows them to create patron profiles to automate the task of recording and updating custom product orders.

- Designed as a logistical interface utilizing various models to manage and organize detailed product orders while maintaining REST standards for nested routes throughout all CRUD actions
- Equipped with third party authentication as well as internal authentication and encryption

EXPERIENCE

Amazon Logistics

Austin, TX

Learning Ambassador/ Delivery Service Partner

09/2020 - Present

- Being flexible and able to jump to any position within the team, I was quickly chosen for Learning Ambassador trusted to assist in teaching new associates and helping with any problems or barriers they may have. I soon transitioned to delivery as I appreciate the autonomy and responsibility of maintaining my own workflow.

Whole Foods Market

Bee Cave, TX

Full-Service Meat Cutter

01/2018 - 07/2020

- Excelled in customer satisfaction and oversaw all aspects of the meat department while mastering the craft of retail meat cutting as a necessary skill needed to adhere to strict quality and health standards. Because of this and my affinity for customer service, I always held the most customer-oriented positions.

GoDaddy

Austin, TX

Inside Sales Representative

08/2018 - 11/2018

- Generated and utilized leads with Salesforce as a member of a hard-working and high-volume inside-sales team. I worked hard for small businesses around the country by giving them access to a network of social media marketing experts.

EDUCATION

Flatiron School

Austin, TX

Full Stack Web Development, Ruby on Rails and JavaScript

08/2019 - 06/2020
